

Expressjs Notes

Most used

- Delete: Deletes the specified resources
- Get: Request the representation of the specified resource
- Head: Requests the headers
- Option: Requests the permitted communication options
- Post: Sends Data to server
- Patch: Applies partial modifications to a resource
- Put: Creates new resource or replaces a representation of the target resource with the request payload

POST HTTP REQUEST EXAMPLE

```
app.post("/api/channel", (req, res) => {  
  //add new channel then return new list  
  // respond with a 201  
  let { name } = req.body;  
  console.log(req.body);  
  let id =  
    data.channels.reduce((prev, curr) => {  
      return prev < curr.id ? curr.id : prev;  
    }, 0) + 1;  
  let last_update = Date.now();  
  let obj = { id, name, last_update };  
  data.channels.push(obj);  
  res.status(201).json(obj);  
  console.log("POST", data.channels);  
});
```
